ABSTRACT

Well-planned vegan diets can provide appropriate nutrition, and long-term health will be equivalent to that of persons who eat moderate amounts of meat and follow nutritional standards for optimal health. Each year, the world generates almost 340 million tonnes. However, meat production has significant environmental consequences, such as increased greenhouse gas emissions, agricultural land use, and freshwater consumption.

When it comes to dairy products, there is no conclusive proof that excessive consumption is harmful to one's health. We do know that high-fat dairy products contribute significantly to the quantity of saturated fat in the diet, which increases the risk of heart disease. Raising animals for slaughter requires a lot of water and land. The theme of vegan Doge is to Be vegan at least two days a week to reduce the consumption of animal food.

Our Aim

Worldwide meat consumption is increasing: meat output has more than tripled in the last 50 years. Vegan Doge is launching to help vegans. Vegans have their menu at major companies like Amazon, Netflix, and Google.

Animal products are being more widely used in daily life, for example, to produce more milk, people are abusing animals such as cows. The desire for animal goods will be reduced if we go vegan for at least two days. We're here to spread veganism among the general public so that animal suffering is reduced if we at least switch to veganism for two or three days a week. Veganism is the fastest-growing animal-saving ideology.

About VeganDoge

VEGANDOGE is a hyper-deflationary token to invest in a variety of asset classes including NFTs, nodes, altcoins, staking, and stable coin farming. This investment diversification helps you to reduce risk while also benefiting from the non-correlated growth of trending assets.

VEGANDOGE has also placed an automatic 4% burn tax on BSC in addition to this deflationary strategy. Due to the decrease in circulating supply, the combination of these two mechanisms ensures a constantly rising price floor.

FEATURES

HYPER DEFLATIONARY

A new trend and concept in tokenomics are gaining traction in the crypto-verse. With the rise in demand, more and more companies, including VeganDoge, are using hyper-deflationary token methods to encourage their holders. Hyper-deflationary tokens, to put it simply, are designed to be very deflationary. This is accomplished by a token contract that requires each transfer of VeganDoge tokens to burn a set percentage of tokens. VeganDoge is a hyper-deflationary token with a burning process that will reward its holders.

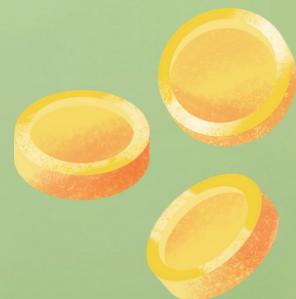

BURNING ON EACH TRANSACTION

Burning a particular quantity of crypto tokens means they have been permanently removed from circulation. When the market is overflowing with cryptocurrencies, the price of that token remains low since demand never exceeds supply. Burning a portion of the cryptocurrency functions as a 'deflationary' action in this scenario, and VeganDoge is employing this strategy. The token's scarcity increases, causing the remaining VeganDoge tokens in circulation to appreciate.

DYNAMIC HOLDER REFLECTIONS

VeganDoge uses this approach to reduce the negative sell pressure on the token created by early holders liquidating their holdings. The reflection mechanism also encourages holders to keep their VeganDoge tokens to receive higher rewards that are proportional to their holdings. The reflection technique effectively doubles the reward for VeganDoge token holders who keep their tokens the longest. VeganDoge and other reflection tokens are quickly drawing seasoned crypto traders.

Metaverse and NFTs

Metaverses have existed in the form of multiplayer internet games for decades. However, we may soon be approaching an era of near-indistinguishable-from-reality immersive experiences, ushering in new types of interaction for both gamers and non-gamers. VeganDoge has added the play-to-earn concept to the Metaverse and NFT gaming platforms, allowing gamers to better their gaming experience while also earning rewards. VeganDoge is working on a lovely P2E Metaverse game. We will drop mystery boxes while you are playing the game. BUSD, Feg, Volt, Baby Doge, and other prominent cryptos are included in these mystery boxes.

The technology and culture surrounding NFTs are always changing, resulting in new ideas. As NFTs make their way into everything from the art market to video games, large corporations are getting in on the act.

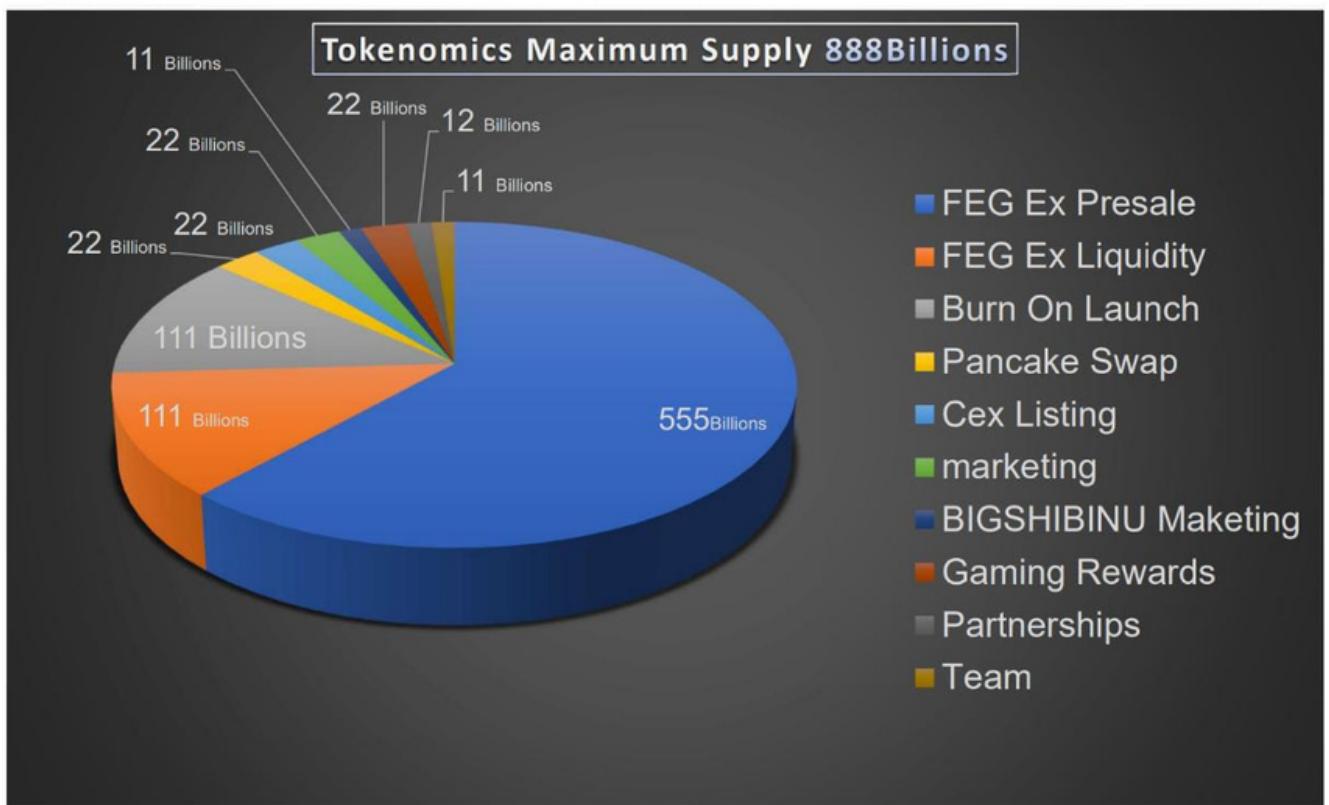

Because each NFT is protected by a cryptographic key that cannot be erased, copied, or destroyed, it allows for the safe, decentralized authentication of one's virtual identity and digital assets, which is necessary for metaverse communities to survive and interact. As a Vegan NFT character, you must catch Vegan things, each of which will earn you +10 points, while non-vegan items will give you -20 points. Everyone has an equal chance of winning daily, weekly, and monthly thousands of dollars.

Tokenomics

- \$VDOGE MAXIMUM SUPPLY 888 BILLION
- FEG EX PRESALE 555 BILLION
- CEX LISTING 22BILLIONS
- FEG EX LIQUIDITY 111 BILLION
- MARKETING 22BILLIONS
- BURN ON LAUNCH 111 BILLION
- BIGSHIBINU MARKETING 11BILLIONS
- PANCAKE SWAP 22BILLIONS
- GAMING REWARDS 22 BILLION
